

PROTECT

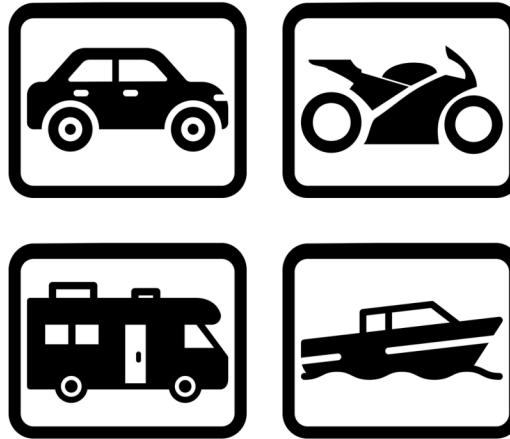

Protect your vehicle's engine for life with an exclusive dealership program using a Lucas Oil engine additive.

VALUE

Your vehicle's engine is the most expensive component to repair or replace. How much does it cost?

The cost of replacing or repairing an engine may vary depending on the engine type and the type of repair it requires. However, the average price of engine repairs can vary from \$3000 to \$4500.

The price for new engines starts at approximately \$4,000 for a 4 cylinder, \$6000 for a V6, and \$7,000 for a V8. Prices may increase based on the engine's complexity and the car's brand. For example, the cost to install a performance engine in an imported luxury car is higher than the cost to install an economy car's base engine.
